

**Scaffolded Practice: Interpreting Various Forms of Quadratic Functions**

Use the given functions to complete all parts of problems 1–3.

1.  $f(x) = 2x^2 - 7x - 4$

- a. Identify the  $y$ -intercept.
  
  
  
  
  
  
  
  
  
  
- b. Identify the vertex.
  
  
  
  
  
  
  
  
  
  
- c. Identify whether the function has a maximum or minimum.

2.  $f(x) = -\frac{1}{3}(3x + 1)(2x - 1)$

- a. Identify the  $x$ -intercepts.
  
  
  
  
  
  
  
  
  
  
- b. Identify the  $y$ -intercepts.
  
  
  
  
  
  
  
  
  
  
- c. Identify the axis of symmetry.
  
  
  
  
  
  
  
  
  
  
- d. Identify the vertex.

3.  $f(x) = -7(x + 3)^2 + 5$

- a. Identify the vertex.
  
  
  
  
  
  
  
  
  
  
- b. Identify whether the function has a maximum or minimum.

Date: \_\_\_\_\_

For problems 4–10, use the given information to complete the problems.

4. Aerobic pilots can maneuver jet planes with impressive control. A popular stunt performed by pilots involves decreasing altitude to a height near the ground and then re-ascending. A particular pilot's path during this stunt is modeled by the function  $h(t) = t^2 - 30t + 250$ , where  $h$  denotes the pilot's height above the ground (in meters) at time  $t$  (in seconds). Graph the function, determine its vertex, and interpret the minimum value in this context.

5. Find the maximum or minimum of the function  $g(t) = -2(t - 2)(t + 4)$ . What are the coordinates of this point?
6. Find the  $x$ -intercepts of the function  $f(x) = 2(x + 3)(x - 3)$ .

7. The curveball is an essential pitch in baseball. It follows a parabolic motion in which it “breaks,” or descends sharply, after reaching its maximum height, fooling the batter. Suppose a pitcher’s curveball follows the path  $r(x) = -\frac{1}{400}(x - 40)^2 + 10$ , where  $r$  denotes the ball’s height (in feet) at a given distance  $x$  (in feet) away from the pitcher and toward home plate. Graph the function. Then, determine the vertex and interpret it in this context.

8. Determine whether  $f(x) = 6(x + 4)(x + 2)$  has a maximum or a minimum. Find the coordinates of that extremum.

Name: \_\_\_\_\_

Date: \_\_\_\_\_

9. A volleyball server must have exceptional precision when serving. Suppose a particular server wants to launch the ball at the farthest corner on the opposing side. Let the function  $B(x) = -\frac{1}{9}(x - 18)(x + 1)$  describe the height  $B$  (in meters) of the ball at a given distance  $x$  (in meters) from the server. Graph the function. Then, determine the  $x$ -intercepts and interpret them in this context.

10. Find the  $x$ -intercepts of the function  $U(x) = -6(x - 7)^2 + 6$ .
